Computer Aided Quality Solutions

CAQ.Net software solutions by CAQ AG have been in action since 1993 all around the globe wherever it is important to ensure the quality, safety, and functionality of products. Perfect both your strategic quality management as well as your operational quality assurance processes with **CAQ.Net** and establish a company-wide quality mindset.

Computer Aided Quality

Intelligent interfaces, global networking, cloud technology, and integrated AI assistants: Computer Aided Quality with **CAQ.Net** provides you with software solutions that have been thought through down to the minutest detail and enable completely digitalized quality processes at the highest level.

AI assistant for creating e-learning courses

CAQ.Net Embedded AI: Integrated AI Assistants

CAQ.Net embedded AI consists of module-specific and cross-modular AI assistants, which support users of the software throughout the completion of various tasks – or perform certain tasks all by themselves. The integrated AI assistant can, for example, support you in the following by:

■ Training Management

Creating specific exam questions along with possible answers for e-learnings from PDF documents and training information.

■ Complaint Management

Automatically filling an Ishikawa diagram based on information relating to articles, type of defect, defect location, or similar as well as generating deviations or complaints based on information added via drag & drop from e-mails and PDF documents.

■ Process Management

Generating process workflow drafts for defined topics requiring you to merely adapt them to your needs.

■ Audit Questionnaires

Incorporating audit descriptions, comments, and PDF documents into the creation of audit questionnaires and providing suitable outlines with questions.

■ Document Management

Automatically generating procedural instructions in the software on a specific topic based on information such as document name, content, and scope.

The assistants are located precisely where the user would complete a task in the software when using the software in the traditional way, without generative AI support. Use AI as intensively as you need in each specific application to achieve your desired result.

Management

Process Management

Process management, process visualization, and workflow management including turtle diagrams and flowcharts. **Process.Net** is a software that allows you to define, plan, and document all processes in compliance with pertinent standards and conveniently distribute them throughout your company.

Document Management

Document management and document control including rights management, electronic signatures, task management, and version control – **QBD.Net** allows you to create, maintain, and control all your documents with just one program.

Training Management

Training and skills management along with e-learning, skills matrix, and potential analysis. The **Qualify.Net** software offers everything you need to plan, perform, manage, and control all qualification measures in your company.

Project Management

Project management, project processing, and project evaluation including Gantt charts, project templates, and milestones. The **Projects.Net** software provides you with end-to-end support from the preparation and planning of a project to its execution and completion.

Change Management

Change management, change control, and change workflows including template management, monitoring, and analysis: with **Change.Net**, nothing is forgotten or overlooked throughout change processes.

KPI Management

KPI management, target agreements, and balanced scorecards in one software including reporting, visualization, and management review: **Success.Net** facilitates cutting-edge KPI management by integrating any external system or data source.

Assurance

Quality Inspection

Inspection planning, quality inspection, SPC, and LIMS in one software including incoming goods inspection, outgoing goods inspection, control charts, CAD, analysis, and evaluation. The software **Compact.Net** offers you everything you need for holistic quality assurance in order to implement key requirements of ISO 9001, IATF 16949, ISO 13485, IFS, GxP, AS / EN 9100 as well as a variety of other regulations.

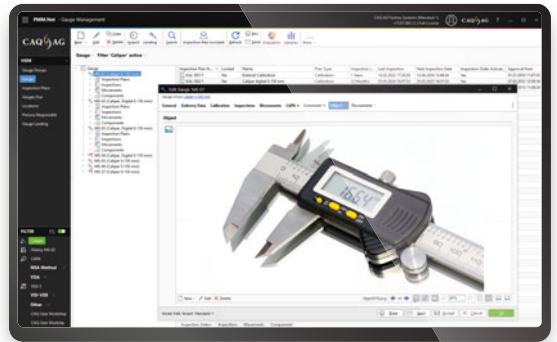

Initial Sample Inspections

First article inspections (FAI), inspection planning, and initial sample inspection reports (ISIR) including PPAP and QDX. The VDA-compliant software **EMP.Net** supports you in the planning, execution, documentation, and management of initial sample inspections as well as the creation of standard-compliant reports.

Gauge Management

Gauge management, gauge monitoring, and measurement system analysis (MSA) including calibration and lending management. **PMM.Net** is a software that supports you throughout the standard-compliant management, capability testing, and calibration of your gauges.

Maintenance Management

Maintenance management for plants, tools, machines, and other equipment including warehouse management and safety checks. **PMS.Net** is a software that intelligently initiates and monitors all necessary inspections in your production facility, either according to predefined schedules or on an as-needed basis.

Monitoring

Audit Management

Audit management, audit planning, and audit execution including audit assessment, online / offline acquisition, LPA, and evaluation. As an internationally recognized tool in the realms of auditing and certification, the software **QAM.Net** is the ideal system for efficient audit management.

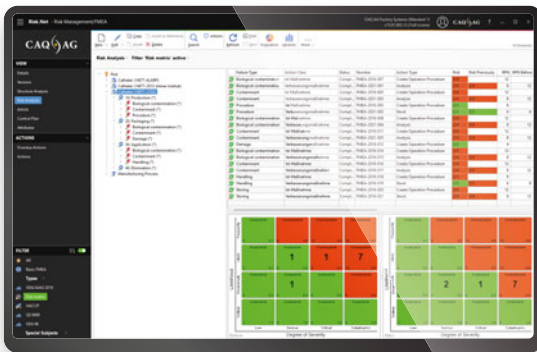

Supplier Management

Supplier management, supplier evaluation, and supplier development including classifications and calculation methods. **SRM.Net** enables you to systematically and effectively manage all your supplier relationships using freely definable hard and soft facts, key figures, and up-to-the-minute data.

Risk Management

Risk management, FMEA, HACCP, and risk analysis including risk matrix and root cause analysis. With the software **Risk.Net** you can identify, evaluate, and document relevant risks and thus meet the critical requirements of customers or regulatory authorities.

Complaint Management

Complaint management, deviation management and CAPA including 8D reports, Ishikawa, 5-Why, and escalation management. The software **REM.Net** supports you in your day-to-day complaint management workflow and accompanies you throughout the entire processing of complaints – from receipt and processing to feedback, analysis, and cost control.

Why CAQ.Net?

✓ Scalable & Multilingual

Whether you only require a single module or wish to integrate a global multilingual solution into your existing system landscape: the software adapts to your needs and grows with you.

✓ Fully Integrated

CAQ.Net is a management system that fluently communicates with other IT-systems and facilitates the mutual transfer of data within your existing infrastructure. In addition to various file-based, ODBC, and specialized interfaces such as LDAP or SAP-RFCs, we offer an interface that complies with the OpenAPI (Swagger) specification.

✓ Central Dashboard

You can select individual processes, people, customers, suppliers, items, machines, or attributes and directly get all data that exists for that entity.

✓ Global Task Management

The comprehensive task management in the software fully automatically monitors the status and processing level of all defined measures.

✓ Configurable Interfaces

Configure the software exactly as you need it: you can, for example, independently show or hide fields, define default values as required or read-only, add your own buttons, or edit field names – including full updateability.

✓ Customizable Documents

You can independently customize the look and content of all print documents and e-mails just as you need it for your daily workflows.

✓ Unique License Model

Your location, your department, your computer – licenses can be assigned exclusively to a client, a user group, a user, or a workstation: you determine the hierarchy.

Trust the Experts

Whether SaaS, OpenAPI, AI assistants, or mobile apps – **CAQ.Net** is a software solution that is highly flexible regarding both implementation method and integration into existing IT system landscapes. **CAQ.Net** always provides the appropriate solution to your individual usage scenario:

SaaS or On-Premises

CAQ.Net can be implemented either as SaaS solution, as an application installed in your company's own infrastructure, or as cloud software hosted by your IT service provider. Thanks to our flexible licensing terms, changing from a hosted SaaS variant to self-powered purchase software and vice versa is possible at any time.

AI Assistants

Whether questionnaires in training management, Ishikawa diagrams in complaint management, or audit catalogues in audit management: use AI as intensively as you need in each specific application to achieve your desired result. Use any prompts you wish, refine the answers provided, and only initiate further actions once you are satisfied with the AI-delivered result.

OpenAPI

Thanks to OpenAPI interfaces, the full information technology spectrum of **CAQ.Net** can be utilized across all software systems in your company. Think of OpenAPI as facilitating a world where all your systems can communicate with each other in real-time.

Mobile Apps

Mobile apps provide you with access to elements such as gauges or audits contained in the software and allow you to monitor and manage these items from your smartphone or tablet – including the integration of camera technology and usage of QR codes.

Web Portals

CAQ.Net allows you to integrate a variety of web portals in order to seamlessly integrate all customers and suppliers into your quality management processes and exchange quality-related data such as documents, audits, or supplier questionnaires in an encrypted and legally compliant manner.

Our Software – Your Solution

We know from over 30 years of market experience that companies have the most diverse requirements regarding the digitalization of their quality processes. **CAQ.Net** software therefore adapts optimally to a wide variety of needs. Discuss your digitalization project with us today and together we will identify which solutions best suit your needs and work out the ideal implementation method.

Why CAQ AG? Join the Best.

Technologically leading companies from all over the world rely on CAQ AG software solutions:
